QUESTION:

GEMU) VALVE BTRFLY:DRAIN WAFER;DN 32;PN25

There is mention of Actuator Pneumatic. What type of control function is required? N/C, N/O or D/A?
2. With the mention of flanged? We can offer lugged version. Would this be accepted? 3. There is mention of PN25 design rating but operating pressure of 3.16 bar? Does PN25 need to be offered or can we offer our stated valve with 16 bar?

RESPONSE:

Don't worry about the actuator, when that is mentioned it is a requirement for our cataloguing, we need flanged not lugged version, 16 Bar is acceptable
