To Whom It May Concern

Factories Accredited by Eskom for Transmission Transformers & Reactors

1. Accredited factories

Below is a list of factories that are currently evaluated and qualified for compliance to Eskom's technical and SHEQ specifications, and their accreditation is valid for supply of high voltage (Class 3), extra-high voltage (Class 4) and specialized (HVDC) transformers and reactors.

- ABB Bad Honnef (Class 3) and ABB Sweden (Class 3; Class 4; HVDC)
- Actom Power Transformer – Wadeville (Class 3a)
- Fuji Electric – Chiba factory (Class 3; Class 4)
- Hyosung Heavy Industries (Class 3)
- Hyundai Heavy Industries (Class 3)
- SGB Smit – Pretoria factory (Class 3)
- Siemens KPT (Class 3; HVDC) and Siemens Weiz (Class 3; Class 4)
- WEG Transformer – Brazil (Class 3)

2. Meaning of the list

- This letter is valid until June 2022 or until communicated otherwise before then.
- The list is not intended to prohibit any factory from participating in Eskom tenders. When using factories that are outside this list, the procurement program must allow for a factory accreditation exercise by Eskom personnel.
- Accreditation does not mean wholesale design approval. Each factory will be in possession of design approvals for a given size of a transformer. Where there is no design approval, a design review and approval will be required before transformer materials are ordered.
- Factory accreditation does not mean that a company is guaranteed Eskom orders. Their participation in an Eskom commercial process is still required.
- Factories that are not accredited are not prohibited or restricted in any way from tendering for Eskom work. They will be evaluated at the right time during the tender evaluation stage, subject to meeting certain minimum technical and non-technical compliance.

Yours sincerely

Prince Moyo
