TENDER DESCRIPTION:
EMCO HARDNESS TESTER

SUPPLIERS CLARIFICATION NOTIFICATION

Note: Service in calibrating machines in Eskom, could kindly elaborate or explain further a little bit what is it that needs to be done maybe including supply of new equipment if or just lab work only?

RE:

- 1. The EMCOTEST hardness tester must be Services and calibrated once a year so we need a quote on that.**
- 2. In the situation where the machine breaks down or gets damaged we will also need an assistance on fixing the machine so they must give us a quote i.e. price per hour for labour, travelling cost to our facility at Rosherville, troubleshooting and any fixed other cost that will be related to the fixing of the hardness testing machine. The quote will exclude the prices of the parts since the prices of the parts will depend on what is broken during the maintenance.**
- 3. We also need quote on consumables such as Verification/Calibration test blocks, indenters for Brinell, Vickers, Rockwell and any other consumables that goes with the instrument.**
- 4. Please note that we DO NOT want to purchase a new machine.**
- 5. The supplier must also check the technical evaluation criteria and Scope of Work attached on the OLT.**

Queries relating to these Invitation documents may be addressed to the Eskom Representative.

Yours faithfully
